

Bureau of Water Management and  
**WATER RESOURCES COMMISSION**  
Memorandum

US EPA RECORDS CENTER REGION 5

504995

To: Fred Kellow  
Dept. of Public Health  
From: Larry N. Witte *LNW*  
Date: November 5, 1969

SUBJECT: Proposed Sanitary Landfill  
Near Plum Creek, City of Monroe  
Monroe County

*file Monroe Co  
landfill*

A review of available information indicates that the proposed landfill at the site shown on the enclosed map is not within a flood plain area. Therefore, we offer no objection under Act 167, Public Acts of 1968.

We wish to advise you that the high water level of record for Lake Erie is 572-8 I.G.L.D., this corresponds to elevation 571.3 (U.S.G.S. datum). This is recorded as a static water level only. Information obtained from the Lake Survey Division of the Corps of Engineers indicates that the ultimate water level, obtained by adding the run-up due to wind-driven waves to the storm water level, for this reach along Lake Erie is elevation 583.0 I.G.L.D.

Please contact us if we can be of further service.
